Product-owning systems designer/builder for AI and complex financial products

I turn technically dense AI and financial products into systems teams can ship, users can trust, and companies can scale.

I work across product direction, UX architecture, design systems, and implementation. I'm most useful when a product is hard to explain, hard to ship, or hard to scale. That usually means complex financial logic, AI agent workflows, messy early-stage roadmaps, or interfaces where the real challenge is not polish but system clarity.

My background spans enterprise analytics, DeFi, NFT infrastructure, and now agent-native AI. I've led and scaled a £25M+ analytics product, supported $200M+ in deposits, led teams of 40+ designers and developers, and built design systems, motion systems, and orchestration layers for products with real technical complexity.

Where I create leverage
• Turn ambiguity into a product model, working UX, and shippable roadmap
• Reduce complex workflows into systems users can understand and teams can maintain
• Build the design system and implementation layer together, not as separate afterthoughts
• Work directly with engineers and often inside the stack
• Stay close to production, telemetry, and actual system behavior

Recent work
• TasteOps: built an agent-driven production pipeline with evaluation and redeployment loops
• Sentury: designing APIs and orchestration for agent discovery and coordination
• Makina: led product direction, design system architecture, tooling, and generative asset workflows
• Superform / Dopex / Curve: designed DeFi flows across vaults, dashboards, structured products, and trader tooling
• IRI / Aimia: helped build and scale a £25M+ enterprise analytics product

Best fit
Founding Product Designer. Product Design Lead. Design Engineer.

AI infrastructure, agent-native products, financial infrastructure, workflow tools, and other technically dense systems where design needs to own more than the interface.

Based in London, working across UK, Europe, and US teams.

PRODUCT DESIGN LEAD / DESIGN ENGINEER
Product-owning systems designer/builder for AI and complex financial products

SUMMARY
Product design lead and design engineer working across product strategy, UX architecture, design systems, and implementation for AI-native and complex financial products. Strong in 0→1 and scaling environments where the product is technically dense, the roadmap is ambiguous, and the team needs someone who can define the system, align the work, and ship to production. Experience spans enterprise analytics, DeFi, NFT infrastructure, and agent-native workflows. Led and scaled a £25M+ analytics product, supported $200M+ in deposits, and managed teams of 40+ designers and developers.

CORE SKILLS
Product strategy and roadmapping | UX architecture | interaction design | design systems | design tokens | component libraries | frontend implementation | React | Next.js | Tailwind | AI/agent workflows | financial product design | DeFi/crypto UX | data visualization | motion systems | prototyping | cross-functional leadership | team management

TasteOps and Sentury Inc — Founder | 2026–Present
• Built agent-driven production pipeline spanning research, scripting, rendering, publishing, evaluation, and redeployment.
• Developed product-motion systems for autonomous media output.
• Designed APIs and tooling for agent-to-agent service discovery.
• Defined product direction, deployment patterns, monitoring requirements, and UX for agent-native interfaces.

Makina Finance — Principal Product Designer | 2025–Present
• Owned product direction and brand evolution from v1.1 onward.
• Built a scalable design system using Tailwind and token architecture.
• Developed Figma plugins, AI-assisted component libraries, and generative asset pipelines to increase design and shipping speed.

StripChain / Silent Protocol — Principal Product Designer | 2024–2025
• Led UX/UI across DEX, SDK, and wallet products.
• Designed interaction patterns for privacy-preserving and token-based flows.
• Delivered an end-to-end design system, including Rive components and WebGL prototypes.

Superform.xyz — Principal Product Designer | 2022–2024
• Designed vault creation, deposit, and yield-tracking flows across a multi-chain product.
• Supported $200M+ in deposits by clarifying complex financial workflows for users.
• Built a scalable dashboard system and contributed ERC-4626 educational materials.

Dopex — Lead Product Designer | 2022
• Designed options chain and structured-product dApps.
• Simplified liquidity provisioning and vault flows for advanced users.
• Built payoff-visualization systems for complex financial products.

Curve — Lead Product Designer | 2019–2020
• Simplified pool creation and smart contract workflows.
• Improved trader-facing data layout and reduced friction across complex transaction flows.

IRI Worldwide / Aimia — Design Director | 2014–2022
• Led and scaled a £25M+ analytics product.
• Directed platform UX for AI/ML insight dashboards and enterprise analytics workflows.
• Built and scaled design systems and UI libraries.
• Hired and managed 40+ designers and developers.

Earlier Experience — Agency Design Director | 2003–2014
• Led digital product and campaign work across major global brands.
• Delivered multiple top-ranking App Store releases.
